# Adding and subtracting rational expressions practice worksheet answers

11-4 practice worksheet adding and subtracting rational expressions answers. 8-2 practice adding and subtracting rational expressions worksheet answers.

Rational expressions: This rational worksheet expressions will produce problems for adding rational expressions and subtraction. You can select the type of operator and the types of denominators you want in every expression. Click here for more Algebra 1 - Rational Expressions worksheets MathWorksheetsgo.com is now a part of Mathwarehouse.com. All your worksheets are now here on Mathwarehouse.com. Please update your bookmarks! Students will be able to practice the addition of rational expressions and subtracting rational expressions. Note: Worksheet of this page focuses on adding rational expressions with denominators like. We also have a separate worksheet on how to add and subtract rational expressions that have denominators difference. II. Directions: Add and subtract rational expressions under the error: Click "It's not a robot", then try download again. This is a 4-part worksheet: Part IMM Problems Part II Practical Party Part III Party Problems Part IV Response Rational Expressions How to add and subtract rational expressions expressions: Click "Not a robot", then Try downloading again. CALL NOW TO SET UP TUTORING: (888) 888-0446 There are some steps to follow when adding or remove rational expressions with difference denominators. To add or subtract rational expressions with difference denominators, first find the denominator LCM. The LCM of the fraction denominators or rational expressions is also called minimum common denominator, or LCD. Write any expression using the LCD display. Make sure that each term has the LCD display as a denominator. Add or subtract the numbers. Simplify, if necessary. Example 1: Add  $\frac{1}{3} + \frac{1}{4}$ . Since the denominators are not the same, find the LCD. From 3 to and 4 bs do not have common factors, the LCM is simply their product: 3 to 4 b. Ie, the fractions LCD is a 12 b. Rewrite fractions using the LCD display.  $(\frac{1}{3} \cdot \frac{4}{4} + \frac{1}{4} \cdot \frac{3}{3}) = \frac{4}{12} + \frac{3}{12} = \frac{7}{12}$ . Example 2: Add  $\frac{1}{4x^2} + \frac{5}{6xy^2}$ . Since the denominators are not the same, find the LCD. Here, the GCF of  $4x^2$  and  $6xy^2$  is  $2x$ . So, the lcm is the product divided by  $2x$ :  $\text{lcm} = \frac{4x^2 \cdot 6xy^2}{2x} = 12xy^2$ . Rewrite fractions using the LCD display:  $\frac{1}{4x^2} \cdot \frac{3y}{3y} + \frac{5}{6xy^2} \cdot \frac{2x}{2x} = \frac{3y}{12xy^2} + \frac{10x}{12xy^2} = \frac{3y + 10x}{12xy^2}$ . Example 3: Subtract  $\frac{2}{3} - \frac{1}{5}$ . Since the denominators are not the same, find the LCD. The LCM of 3 and 5 is 15. Rewrite the fraction using the LCD display:  $\frac{2}{3} \cdot \frac{5}{5} - \frac{1}{5} \cdot \frac{3}{3} = \frac{10}{15} - \frac{3}{15} = \frac{7}{15}$ . Example 4: Add  $\frac{5}{C+2} + \frac{6}{C-3}$ . Since the denominators are not the same, find the LCD. The LCM of  $C+2$  and  $C-3$  is  $(C+2)(C-3)$ . That is, the LCD of the fractions is  $(C+2)(C-3)$ . Rewrite the fraction using the LCD display:  $\frac{5}{C+2} \cdot \frac{C-3}{C-3} + \frac{6}{C-3} \cdot \frac{C+2}{C+2} = \frac{5(C-3)}{(C+2)(C-3)} + \frac{6(C+2)}{(C+2)(C-3)} = \frac{5C-15+6C+12}{(C+2)(C-3)} = \frac{11C-3}{(C+2)(C-3)}$
